Course Description:

Good games are engaging. They are interactive experiences that encourage players to invest time, energy and emotion. The traditional techniques of scriptwriting employed by fiction and film fall short of the requirements for games. This course endeavors to teach the fundamentals of writing good video game scripts.

Students will learn the techniques of traditional storytelling as they relate to the particulars of writing game scripts. The class will complete exercises in analyzing video game storytelling, creative writing, and the process of turning good ideas into a great script.

Although this is mainly a writing class, students will have opportunities to produce supporting visual material, including character sketches, environments, and storyboards.

Course Requirements and Policies

There will be a lecture and discussion for nearly every class session.

Many classes will involve workshop activities that seek to enhance your writing abilities through practice and guidance. Some workshop activities evolve into homework assignments.

All assignments must be handed in at the beginning of class.

Students should always keep a backup copy of their work.

No late assignments are accepted. Every working professional is expected to provide their work on time. Failing to do so reflects poorly on that person's performance. Repeated failure to meet deadlines often results in firing. It is best to learn to meet deadlines now.

In this course, each assignment will build on the previous. Failure to complete the prior week's assignment will make each subsequent week more difficult. It is in your best interest to complete each assignment on time and to the best of your ability. Always hand in what you have, even if you want to revise it. **Partial credit is better than no credit at all.**
