

This assignment will give you an opportunity to practice the following basic skills:

- Table layout
- Layer (div) layout
- Colors
- Images

To complete the assignment you must create the following flags using **both layers and tables**. That means you will have 6 total html pages. To get an A you must:

All versions:

- Must match the colors used in the flag.
- Must match the ratio of bands and blocks (e.g. if a stripe takes 1/3 of the flag, it should take 1/3 of your version of the flag and remain that way)
- If the flag has an emblem, you must include that emblem in your design.

Table Versions:

- Your flags must be “liquid.” This means that when the browser window is expanded or contracted the flag grows and shrinks.

Layer Versions:

- Your flags must be locked in the upper left corner side. Your flag does not have to be liquid, but extra credit will be given for liquid designs.

The flags to imitate are show below:

Extra Credit (no images may be used):
